

ANNOUNCEMENT

OF THE

Philadelphia College of Medicine,

FOR THE

COLLEGIATE YEAR, 1855-6.

WITH THE

CATALOGUE OF GRADUATES.

PHILADELPHIA:

INQUIRER BOOK PRESS, 57 SOUTH THIRD STREET.
1855.

Philadelphia College of Medicine,

FIFTH STREET, BELOW WALNUT.

PRESIDENT.

HON. CHIEF JUSTICE ELLIS LEWIS, M.D., LL.D.,

SECRETARY.

HON. J. R. TYSON, LL.D.,

FACULTY.

GEORGE HEWSTON, M.D.,
PROFESSOR OF ANATOMY.

B. HOWARD RAND, M.D.,
PROFESSOR OF CHEMISTRY.

HENRY HARTSHORNE, M.D.,
PROFESSOR OF THE INSTITUTES OF MEDICINE.

ISAAC A. PENNYPACKER, M.D.,
PROFESSOR OF THEORY AND PRACTICE OF MEDICINE.

JAMES L. TYSON, M.D.,
PROFESSOR OF MATERIA MEDICA AND GENERAL THERAPEUTICS.

JAMES BRYAN, M.D.,
PROFESSOR OF THE PRINCIPLES AND PRACTICE OF SURGERY.

LEWIS D. HARLOW, M.D.,
PROFESSOR OF OBSTETRICS AND DISEASES OF WOMEN AND CHILDREN.

JOSEPH PARRISH, M.D.,
EMERITUS PROFESSOR OF OBSTETRICS AND DISEASES OF WOMEN AND CHILDREN.

WILLIAM H. FREEMAN, M.D.,
DEMONSTRATOR OF ANATOMY.

B. HOWARD RAND, M.D.,
DEAN.

WILLIAM EASTLAND,
JANITOR.

ANNOUNCEMENT.

COLLEGIATE YEAR, 1855-56.

THE Corporators of the *Philadelphia College of Medicine* are happy to announce to its Alumni and friends, that they have, by aid of the Faculty, succeeded in carrying out their main object, in establishing for the Institution a high professional position.

It is their purpose to give to the instructions of the College an especially thorough and practical character; so as to enable the young physician to pass from graduation to the discharge of his professional duties, with a well grounded preparation and assurance of success.

The College Building, Museum, and Corporate powers having been purchased and transferred from the late owners, it is the aim and determination of the Corporators and Faculty to maintain the Institution in a position of honorable equality, in every respect, with the best medical schools of the country.

The movements made by the American Medical Association for the elevation of the dignity of the profession, and the advancement of the acquirements of Students of Medicine, are heartily concurred in by the Faculty.

A copy of the *Code of Ethics* of the Association, adopted May, 1847, is presented to each graduate, with his diploma, at the commencement.

The Faculty also wish to convey to students an expression of their firm conviction, that attendance upon a *third course*, which is offered without additional charge to those who have attended two sessions in this Institution—is a highly important step, and conducive to their future welfare. It is grati-

fying to find, upon reference to the records of the Institution, that a majority of those who have taken the perpetual ticket have attended three or more courses of Lectures; and that among these have been several gentlemen who have distinguished themselves by their success before the Army and Navy Medical Boards.

It is at the same time the belief of the Faculty, that the true test of fitness for a Medical degree is *merit* and *acquisition*. All other requisites and conditions of graduation should be subordinate to these.

By the proposition already distinctly made, to unite with other Institutions in placing the examining power with an impartial Board outside of the Colleges, it is shown that it is the sole wish, and will be the unwearied endeavour, of this Faculty, to fit *competent* men for the practice of medicine, and to afford every possible advantage towards this end.

The *Collegiate Year* will open in October, 1855, and close about the middle of July, 1856.

The Eighteenth Session of this Institution will begin early in October, 1855, and continue until March.

The Nineteenth Session will open on the second Monday in March, 1856, and close in July.

Degrees will be conferred in March and July.

The Spring Course will be as complete in every respect as any given during the winter, by this or other Institutions; and is especially adapted to accommodate gentlemen whose period of study will have expired in July, or whose health will not allow their residence in a cold climate during the winter months.

The College edifice will compare favorably with the most perfect establishments in the United States, in its adaptation to the purposes of medical education, while in all the requisites for instruction it yields to none in its appointments. It is adequately furnished with chemical apparatus, plates, drawings, specimens of the *materia medica*, models in wax and papier mache, &c., and an excellent and extensive Anatomical and Pathological Museum.

A commodious, well-lighted, and warm Reading Room,

open day and evening, is set apart for the students, where they may study or copy notes during the intervals of the lectures.

The Faculty are constantly engaged in multiplying means of illustration, and in increasing, in every possible manner, the opportunities and facilities of the student.

In the arrangement of the building, and in the direction of their courses, everything has been done that may best secure the health, promote the comfort, and advance the scientific interests of the class. The College is remarkably central in its position, being within view of Chesnut street, about one hundred yards from Independence and Washington Squares. It is about four hundred yards from the Pennsylvania Hospital. Omnibuses pass within a short distance, which afford conveyance directly to the Philadelphia and Wills' Hospitals; the Exchange and Post Office are distant only two squares; and comfortable boarding-houses are numerous in the vicinity.

Instead of occupying the first week of the Course in the delivery of Introductory Lectures, the Faculty have determined hereafter to open their sessions by one general Introductory, and the next day commence the regular duties of the session.

The lectures delivered will be eminently practical throughout, and each course will cover the entire ground of the subjects assigned to it. Six lectures are delivered daily, except on Wednesdays and Saturdays, when they are suspended until mid-day, to enable the class to attend the Hospitals, and other practical institutions of the city, at which patients are exhibited, operations publicly performed, and lectures delivered. In order to increase, in this respect, the means of acquiring practical knowledge, every full-course candidate for graduation will be furnished by the Faculty, with the Philadelphia or Pennsylvania Hospital tickets without charge.

At each lecture the Professor will recapitulate, and examine candidates, advanced students, and such other members of the class as may desire to be questioned upon the subjects of his previous lecture. These examinations are optional with the student, though he is advised that in declin-

ing them he loses an opportunity of satisfying those who are to decide upon his claim to a degree, as to his sedulousness in study, and of the extent and solidity of his acquirements.

The Lectures will be delivered according to the following arrangement:—

DR. HEWSTON, four times a week, on General, Special and Surgical Anatomy. Lecturing from the recent subject, calling to his aid preparations, pictures, diagrams, and enlarged models of the first class, for the correctness of illustrations; directing the attention of the student to such morbid and anomalous conditions as may develop themselves in the course of his demonstrations; paying particular attention to the mechanism of the functions, and the direct application of his subject to the practical branches.

DR. RAND, four times a week. His course will be devoted to the study of Chemistry, exclusively in its relation to medicine. With this view all considerations of a purely technical character, as well as the application of the science to arts not connected with medicine, will be passed over. The time thus gained will be devoted to a minute and careful study of the relations of Chemistry to Materia Medica and Pharmacy, as well as its bearings upon Physiology, Pathology, and Diagnosis. The subject of Toxicology will receive a full share of attention. The various poisons will be attentively considered, with their antidotes and tests, which will be, as far as possible, applied before the class. The entire course will be freely illustrated by appropriate experiments, for which the laboratory attached to this department affords every facility.

DR. HENRY HARTSHORNE, three times a week. The subjects of the course upon the Institutes, will be the essential facts and principles of General and Special Physiology, and of general Pathology and Therapeutics. It will be the Lecturer's object, to harmonize these essential principles and facts, so as, upon their union as a basis, to establish a true Philosophy of Medicine. The course will be to some extent progressive, comprising four sections—I. Preliminary. II. Physiological. III. Pathological. IV. Therapeutic; so as

to present, upon the broadest grounds, a scientific foundation for correct Medical Principles.

DR. PENNYPACKER, four times a week, on the Theory and Practice of Medicine. The purpose of the Lecturer will be to make his course eminently *practical*. The history of disease, and the means of diagnosis and cure, will be faithfully exhibited and impressed. He will bring to his aid, in elucidation, notes and reflections accumulated during years of extensive practice, as well as the principal cases of disease from the numerous patients who resort to the College for treatment; besides drawings, pathological specimens, &c.

DR. TYSON, three times a week, on Materia Medica and Therapeutics. His lectures will comprise a clear and concise account of the remedies capable of exerting a sanative influence on the human system; their methods of collection, commercial history, sensible properties and relations, Physiological and Toxicological action, together with their doses, methods of administration, adaptation to, and *modus operandi* in, the treatment of disease.

DR. BRYAN, four times a week, on the Pathology and Treatment of Surgical Diseases; showing—upon the recent subject—the various and most approved modes of operating in all cases requiring the use of the knife. He will elucidate his lectures by models in wax, papier mache and leather, by wet and dry preparations, drawings, &c., illustrating it by cases drawn from long experience and from the best American and European authorities, both ancient and modern. The lecturer will aim at simplicity, clearness, and fullness of matter relating to his branch in all its departments.

The Clinic will afford the class ample opportunity of witnessing operative surgery, and the treatment of surgical diseases.

DR. HARLOW, three times a week, on the Physiology of Reproduction, the conduct and mechanism of Parturition, and the Pathology and treatment of diseases peculiar to women and children. The lectures will be illustrated by dry and wet preparations, drawings and diagrams, in such a manner as to familiarize the student with the prin-

ciples and practice of Obstetric Medicine. In order to add to his facilities in this most important branch of study, a portion of time will be devoted to instructing the pupil in *exercises* on the *Mannequin*; and advanced students, giving evidence of proficiency, will be admitted to the attendance of cases, and other clinical advantages, connected with the Obstetric Dispensary.

THE DEMONSTRATOR OF ANATOMY will have charge of the Anatomical Rooms, under the supervision of the Professor of Anatomy. He will superintend the dissections of the classes, facilitate their labors by his advice, and render their researches more valuable by his demonstrations.

The Anatomical Rooms are large, well lighted, thoroughly ventilated, well furnished with every convenience, and students may rely upon a full supply of material.

FOR PRACTICAL INSTRUCTION, the students of this College will have access to the courses of the Philadelphia and Pennsylvania Hospitals, in the former of which one of the Professors is Clinical lecturer, and to the other facilities for the observation of disease with which the city abounds.

A CLINIC is held at the College every Wednesday and Saturday, to which a large number of patients resort, to be prescribed for and operated upon in presence of the class. Arrangements are made for advanced students to attend Medical, Surgical, and Obstetrical cases, so as to become practically familiar with the conduct of parturition and other sick-room attendance. All possible means of multiplying these opportunities of clinical instructions are employed by the Faculty.

A PHARMACEUTICAL DEPARTMENT is also established in the College Building, in which the advanced student may become practised in compounding medicines for the patients; acquiring in this manner a species of knowledge which will be of great service in the practice of his profession.

Besides the foregoing advantages, it may be mentioned that there are numerous *internes* or junior resident physicians annually elected to the various medical charities of the

city, these posts being open to graduates and students from all quarters of the world.

The Faculty of the Philadelphia College of Medicine, disposed to extend every facility to those who desire a thorough knowledge of medicine, and believing that there are many young gentlemen well qualified by education, talents, and moral worth, to become, like Hunter, Abernethy, and Godman, useful and honorable members of the profession, who would enter upon the study of medicine, or having entered upon, would prosecute their studies to graduation, were it not that their pecuniary means are too restricted to admit of their paying the fees of admission to Collegiate Courses and the honors of the doctorate, have established a beneficiary foundation, upon which they will receive a limited number of such students annually. The number is at present limited to ten. Persons received upon this foundation, will pay, in lieu of the usual fees, the sum of forty dollars for perpetual admission to the lectures of the College, or twenty dollars at the time of matriculation for each of the two courses requisite to entitle them to a degree. All applications, under this foundation, must be made to the Dean, accompanied by an ingenuous statement of the claims of the candidates, and by letters of recommendation from respectable parties, and must be sent in as early as possible.

In deciding upon these applications, the strictest impartiality and justice will be observed, and those will be admitted who come most strongly recommended for early industry, the most thorough preparatory education, for private and personal worth and respectability, and for intellectual promise. In all cases, the sons of physicians, and next to them the sons of clergymen, shall receive the preference.

Degrees are conferred in March and July, in pursuance of a mandamus of the Board of Corporators, on such successful candidates as may be recommended to them by the Faculty, and issued in the name of the "President and Professors."

The requirements for graduation are the following, viz: That the candidate be of good and approved moral character;

that he shall have studied medicine for the period of three years in the office of a respectable practitioner; that he shall have attended two or more full courses of lectures on Anatomy, Chemistry, Materia Medica, Practice of Medicine, Surgery, Midwifery, and Institutes, of which courses one shall have been in the Philadelphia College of Medicine, and the other, if not in this Institution, in some Medical School recognized by it; that he shall have attended, at least, one course of Practical Anatomy, and one course of Hospital Practice or its equivalent; that he shall submit a satisfactory thesis on some medical subject selected by himself, and written in his own hand, on thesis paper, in English, Spanish, French, German, or Latin, and finally that he shall pass a satisfactory examination before the Faculty.

A successful candidate may publish his thesis, if the consent of the Professor by whom it was examined be first obtained, and provided that no alteration be made therein, without the said Professor's permission.

Premature examinations will not be granted except under circumstances of extraordinary urgency and imperativeness, and only to unusually advanced students.

FEES.

For Matriculation Fee, only once paid, - - - - -	\$5.00
For a full course, - - - - -	84.00
For a perpetual Ticket, - - - - -	150.00
For a third course to those who have attended two full courses in other Colleges, - - - - -	50.00
The Graduation Fee,—to be deposited with the thesis, - - -	30.00
For Practical Anatomy, - - - - -	10.00

For further particulars apply to the undersigned, Dean of the Faculty, to whom all letters, &c., on the business of the College, will be addressed.

B. HOWARD RAND, M.D.,

At the College, Fifth Street below Walnut, or at 106 S. Ninth Street above Walnut.

The Janitor will be in attendance at the College to direct students to the Dean and members of the Faculty; to assist them in procuring boarding, and to give such information as may be needed by strangers.
